DIGESTOR NP

Improves Soil and Plant Health

Horticulture. Bananas. Orchards. Legumes

Digestor is microbially formulated to improve crop and soil health, yield and production quality. Digestor brings whole system gains and is formulated to improve nutrient availability, nitrogen cycling and phosphorus release. Digestor improves crop quality, through the building of soil humus – improving soil structure, rooting depth, water infiltration and water holding capacity.

SHAKE CONTAINER WELL PRIOR TO USE

APPLICATION RATE

Digestor is always applied together with its activator Green Carbon Activate. They are applied at equal rates.

Recommended rate: 2–3 litre/hectare. The rate depends on your crop type and crop health. Apply as advised by your agronomist.

Mix Digestor and Green Carbon Activate together into water and apply in the same pass. Always apply with moisture or during moist conditions. Dechlorinate water if using chlorinated town water.

APPLICATION METHODS

- Via irrigation. Pressure should be below 80 psi at any point in the system.
- Via boom spray. This should be done in damp conditions or followed by irrigation. Higher water rates (400L/ha+) need to be used in the absence of irrigation to wash the product into the soil. In boom sprays the pressure should not exceed 45 psi or 3 bar. Filters should be 50 mesh or larger.
- Via liquid/water injection.

This product is distributed by a certified Metagen agronomist. Consult with your agronomist for specific application instructions for your crop. Ideal timing, rates and method of application can vary across systems.
