HEADSTART Root & Seedling Stimulant

Metagen Headstart is a multi-function material applied at planting to increase seed germination and root development. Headstart supports early root establishment and protects seedlings from the shock of transplanting. Headstart builds resilience into the plants from the start.

1L 5L 20L 1000L

SHAKE CONTAINER WELL PRIOR TO USE

Headstart is applied at a rate of 500ml/ha on all crops, turf grass, pastures and trees. It is applied directly to the seed at planting.

Headstart needs to be diluted with at least 10 parts water. All application equipment should be thoroughly cleaned prior to use.

DIRECTIONS

Broadacre and Pasture Sowing:

Headstart is applied in a trio combination in water injection systems: 500ml/ha Headstart in water with 1L/ha Metagen Evergrow NP (or Evergreen) and 500ml/ha Green Carbon Activate.

Horticulture:

Headstart is applied at 500ml/ha in water injection systems at planting Apply in combination with 2L/ha Digester NP and 1L/ha Green Carbon Activate.

Trays:

Headstart can be applied to plants in trays prior to transplanting.

This product is distributed by a certified Metagen agronomist. Consult with your agronomist for specific application instructions for your crop. Ideal timing, rates and method of application can vary across systems.
