## HYDRO TL Penetrant

### Hydroboost Technology

### FAST ABSORPTION - LIQUID CONCENTRATE

Hydro TL Penetrant is an advanced formulation for maximum surface coverage. The technology ensures nutrients penetrate through the cuticle layers. Hydro TL provides increased adhesion and effectively guards against evaporation.

1L  5L  20L  210L  1000L

**SHAKE CONTAINER WELL PRIOR TO USE**

### LIQUID CONCENTRATE

Hydro TL Penetrant is specifically formulated for efficient spreading of spray solutions. Its ultra-fast penetration ensures applied nutrients are absorbed into the leaf. The formulation:

- Allows for easier spreading of spray mixtures due to reduced surface tension
- Maximises adhesion of spray to the leaf
- Provides ultra-fast penetration and absorption of foliar sprays
- Guards against evaporation

### DIRECTIONS

- Use at a rate of 100 ml of Hydro TL Penetrant per 500 Litres, for most application situations.
- For leaves with a thick wax coating (eg. avocados and bananas), use at a rate of 100ml of Hydro TL penetrant per 300 Litres spray volume.
- Hydro TL Penetrant should be added to the tank during addition of water, just prior to completion of filling.
- Hydro TL Penetrant can be added to most final mixes, however coagulation may occur if blended with fertilisers in concentrated form.

### HANDLE WITH CARE

This product is distributed by a certified Metagen agronomist. Consult with your agronomist for specific application instructions for your crop. Ideal timing, rates and method of application can vary across systems.
